

PQMEX® · QUALITY SORTING

Weighed and sorted.

Every batch is measured, weighed and assigned to a quality grade – automatically with the PQMEX®.

01

Approx. 10-minute buffer

The buffer time compensates for the analysis delay.

02

Quality and quantity

Every batch in the weighing hopper – grade and weight are stored.

03

Grades A, B, C

Premium, standard and customised – plus rework.

How the PQMex® sorts your regranulate

Premium (A)

High-grade regranulate for demanding applications.

Standard (B)

Saleable regranulate of standard quality.

Customised (C)

Mixed to individual specification.

Limits to your specification: A limit in gels per m² is stored for each size class – per customer or application. Optional silo control distributes the material to the silos automatically.

Let's talk about your sorting.
